

Why Replace Your Tires?

Because you don't just need a forklift. You need a dependable, safe, and efficient material handling solution that fits your needs.

Tires Are Important

Tires are one of the most important parts of the forklift. There is NO other suspension! Like shock absorbers on a car, tires are the ONLY part of the lift to absorb shocks from bumps in the path of the lift, cracks in the floor, or imperfections on a yard.

Avoid Costly Repairs

As the tires wear, not only does capacity decrease, stability does as well. Each inch of wear drops the truck closer to the driving surface, increasing vulnerability to obstructions and costly repairs.

Potential Costs of Worn Out Tires:

Premature wear to the mast trunnion bearings	\$825
Premature wear to the steer axle pivot bushings	\$650
Premature wear to the engine and transmission mounts	\$280
Premature wear to components mounted with isolators	\$365
Premature wear to the wiring harness	\$2250
Premature damage to the drive and steer wheel bearings	\$780
Premature damage to the steer axle kingpins and thrust bearings	\$1330
Possible damage to hard mounted CPU boards	\$3500
Possible damage to the mast assembly	\$5500
Possible damage to the differential mounting bolts	\$2800

The total cost of repairs could exceed \$18,280!
